 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Developers frequently use CockroachDB, Couchbase, and DuckDB, along with platforms like Cloudflare and Digital Ocean.
- jQuery and React are the most common web frameworks.
- Cloud platforms dominate current usage.
- Distributed databases are widely adopted.
- Interest is shifting toward Firebase, Supabase, and MongoDB for future database work.
- React and full-stack JavaScript frameworks are top choices for future development.
- Most respondents are aged 18–34 with bachelor's or master's degrees.
- These trends suggest aligning training and hiring with modern, cloud-native technologies.

INTRODUCTION

- The project analyzes developer preferences across databases, platforms, and web frameworks.
- It compares tools developers currently use with those they aspire to work with.
- The data was collected from a global pool of respondents with diverse backgrounds.
- Demographic insights reveal trends based on age, education, and geography.
- Most respondents are aged 18–34 with bachelor's or master's degrees.

METHODOLOGY

- Data was collected from a global developer survey focused on technology usage and preferences.
- Responses were analyzed to compare current experience with future interest across databases, platforms, and frameworks.
- Visualizations were created using bar charts and dashboards to highlight key trends.
- Demographic data was used to contextualize technical preferences.
- Age and education levels were cross-referenced with technology choices.
- Geographic distribution helped identify regional patterns in adoption and interest.

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings:

- Javascript, HTML/CSS, and Python are highest used programming languages.
- Python is the most wanted language to work with next year.
- Javascript still ranks 2nd highest for languages people want to work with next year

Implications:

- People are more likely to purchase online courses related to Python than any other language.
- Applications catering to Python are going to be more likely to be utilized by future developers.
- Javascript is still incredibly popular and will continue to have a relevant place in software development.

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings:

- DuckDB is the most popular database to work with this year.
- PostgreSQL is most wanted language for people to work for next year.
- SQLite is an emerging language that is growing in popularity.

Implications:

- SQL's varieties are growing and are becoming an increasingly popular language in the corporate world.
- Increased industry adoption of lightweight and efficient databases
- An increasing shift toward open-source and scalable solutions

DISCUSSION

- Any thoughts?

OVERALL FINDINGS & IMPLICATIONS

Findings:

- Developers are increasingly becoming younger.
- Bachelor's degrees are the most common for developers in the professional field.
- The USA continues to dominate in # of developers.

Implications:

- The tech industry is attracting talent earlier.
- Formal education still holds value in tech careers.
- The USA remains a global tech leader.

CONCLUSION

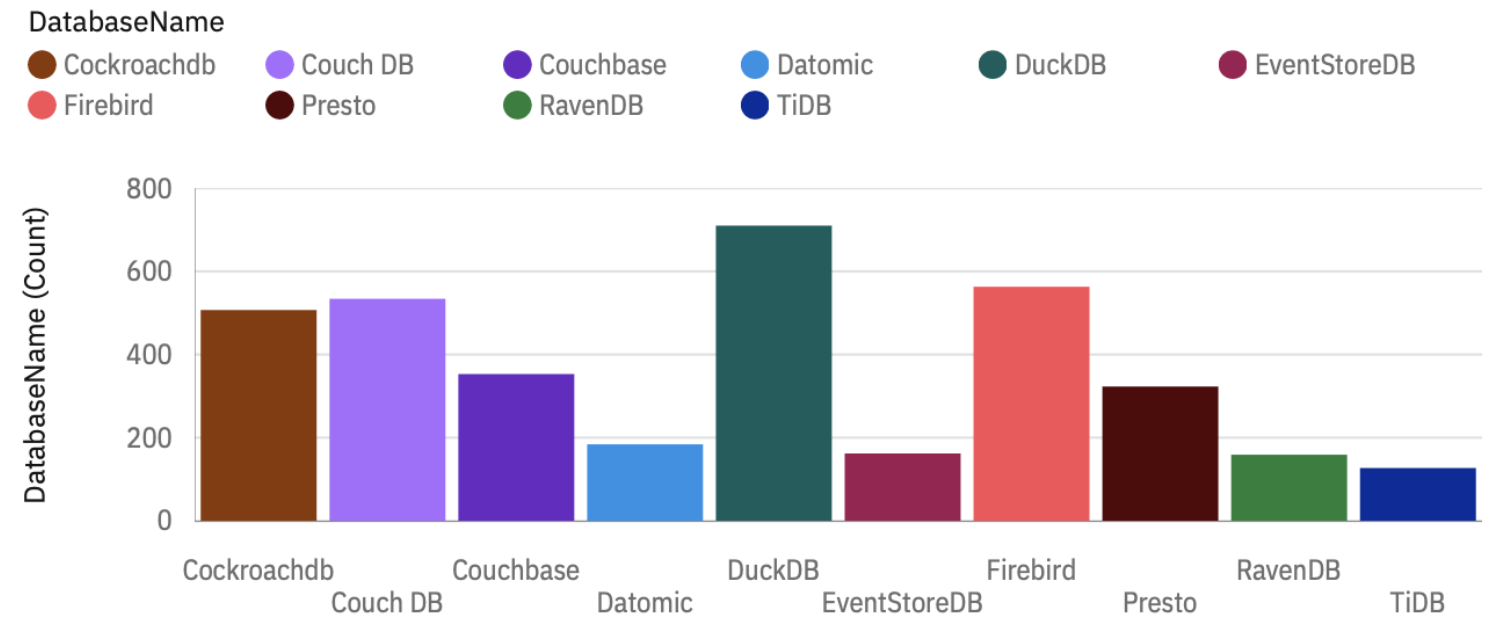

- The developer community is becoming younger, signaling early engagement with technology and coding education.
- Bachelor's degrees remain the most common pathway into professional development roles, showing the continued importance of formal education.
- The United States maintains its position as the leading hub for developers worldwide, emphasizing its strong tech ecosystem.
- The evolving developer landscape highlights the need for organizations to invest in continuous learning and skill development to stay competitive.
